Cloud Transition

Tagline: "Keep Calm and Migrate Smart—We Take the Anxiety Out of Cloud."

Alykas offers end-to-end cloud transition services that help businesses migrate their infrastructure, applications, and data to the cloud with minimal disruption. Our approach begins with strategic consulting to assess your current IT environment and develop a tailored cloud adoption roadmap—whether you're moving to a public, private, or hybrid cloud model.

We go beyond just migration. We help you choose the right cloud provider—whether it's AWS, Microsoft Azure, or another platform—based on your unique business needs, performance goals, and budget. Through cost analysis, value engineering, and ROI-driven planning, we ensure you're making a smart, sustainable investment.

We also address common misconceptions—cloud transformation doesn't have to be expensive. With the right planning and partner, it can reduce costs and increase agility.

From full implementation support to ongoing cloud management, performance optimization, and robust security, Alykas ensures compliance, data protection, and long-term success. We also integrate cloud solutions into broader digital transformation initiatives, leveraging AI, big data, and automation to enhance agility and customer experience.
